

Vastu Knowledge Base

The complete rule set behind a commercial Vastu application

This is every rule the application applies to a home, written out in full, with the provenance of each one stated honestly. We are asking two or three consultants from different schools to mark it — deliberately, so that disagreement between you surfaces rather than hides. Where we have guessed, we say so. Where the schools genuinely conflict, we show the reader both readings and score neither as a fault.

PRODUCT	SCOPE OF THIS REVIEW	OUT OF SCOPE	WHAT WE NEED MOST
An app for people about to buy or build a home. They supply a floor plan, mark which way north is, and are told what the tradition says about it.	9 directions, the mandala, 32 door positions, 15 room rules, 30 faults, 28 remedies, 10 recorded disagreements.	The numerical weights and the 0–100 score. Those are a product invention with no basis in tradition. They are not yours to endorse and we will not claim you did.	Strike anything that should not be there. A false alarm costs us more than a missed fault.

BEFORE YOU BEGIN

How to read this, and what we are asking

Every rule below carries a provenance tag. It is the most important column on the page, because it says how much authority we are claiming for that rule.

TAG	WHAT IT MEANS
TEXTUAL	Traceable to a named classical text, cited inline. The strongest claim we make.
DERIVED	Not a verse we could find, but reasoned from the mandala's deity-directions and taught by virtually every practitioner. Most of the room rules sit here.
MODERN	Traceable to one named school or to twentieth-century commercial practice. No classical basis.
DISPUTED	Schools genuinely conflict. We take no side: the reader is shown both readings and it never counts against their score.

What would be most useful from you

Be blunt. A correction costs us nothing today. The same rule shipped to thousands of homes and found wrong later costs us the only thing this product is selling.

If you can point us to an actual verse for anything marked "derived", that rule becomes "textual" and we cite it in the app. That is the single most valuable thing you can give us.

We do not claim Vastu is scientifically established, and the app does not. It presents rules as traditional prescription, never as guaranteed outcome, and makes no health, wealth or fortune claim. That is both an honesty position and a legal one under Indian advertising and consumer law. Please do not soften your review on the assumption that we need the rules to promise results.

SECTION 1

The nine directions

The deity-element assignment is the classical core. Everything downstream is reasoned from it, which is exactly why it must be right.

DIRECTION	SANSKRIT	DEITY	ELEMENT	DOMAIN AS THE APP STATES IT	YOUR RULING
North	Uttara	Kubera	—	Wealth, career	
North-East	Ishanya	Ishana / Shiva	Water	Clarity, health. The Purusha's head — most sensitive and most auspicious.	
East	Purva	Indra	—	Vitality, social standing	
South-East	Agneya	Agni	Fire	Energy, transformation, finances	
South	Dakshina	Yama	—	Rest, fame, discipline	
South-West	Nairritya	Nirriti	Earth	Stability, bonds. The Purusha's feet — the heaviest zone.	
West	Paschima	Varuna	—	Gains, savings, learning	
North-West	Vayavya	Vayu	Air	Movement, communication, transience	
Centre	Brahmasthan	Brahma	Space	Must stay open. Reserved for the family deity.	

PLEASE RULE

Four things we have decided here without authority.

The domain words. "Wealth, career" for the north and so on are printed to the customer as what that direction governs. Are any of them wrong or misleading?

North, East, South and West carry no element in our data — only the four corners and the centre do. Is that right, or should each direction carry one?

We use the Ashta-Dikpala list. Manu Smriti 7.4 gives a different one, substituting Surya and Chandra for Nirriti and Ishana. We ignore the variant. Correct for a residential product?

We do not implement planetary mapping at all (Sun–East, Venus–South-East, and so on). Should we, or would including it misrepresent classical Vastu?

The mandala, and how a room's direction is decided

The most consequential engineering decision in the product.

WHAT THE APP DOES	PROVENANCE	YOUR RULING
An 81-pada grid, nine by nine — the Paramasayika, the residential model. The 64-pada Manduka is treated as a temple grid and not used.	TEXTUAL	
The Brahmasthan is the central three by three of that nine by nine — nine padas of eighty-one, about an ninth of the area.	DERIVED	
The grid is always laid true-north square, never tilted, whatever angle the building sits at. A rotated building straddles several padas.	TEXTUAL	
An irregular footprint is enclosed in the smallest north-square rectangle. Padas falling outside the built area read as cuts; padas protruding read as extensions.	DERIVED	
A room spanning several padas: for a good placement, the zone holding the largest share of the room wins. For a fault, any meaningful encroachment counts.	DERIVED	
The 16-zone system is treated as a different system, not a refinement, and is not offered. It is angular; this is a pada grid. We judged that offering both would be offering two incompatible geometries.	MODERN	

PLEASE RULE

The two we are least sure of.

The extent of the Brahmasthan. We use the central nine of eighty-one. Others teach the central four of sixty-four, or a ninth of the area however the plan divides. This decides whether a staircase is flagged or not on a great many plans.

A room spanning several padas. We use largest-share for good placements and any-encroachment for faults — deliberately asymmetric, so a room half in the north-east is warned about but not credited. Three methods are in use and we found no canonical rule. Is ours defensible, and should it differ between faults and good placements at all?

The main entrance — thirty-two positions

The highest-weighted single element in the entire reading. Each position spans 11.25°, eight to a side. The framework is traced to the Samarangana Sutradhara's dvaravinyasa.

SETTLE THIS BEFORE ANYTHING ELSE

Where does the count begin?

We resolve a door by its bearing from the centre of the plot. Our table anchors the north side's eight positions from **348.75°**, which is a third of a side clockwise of the north wall itself.

The effect is large and we would rather you heard it from us. **A front door dead in the middle of a north wall resolves to Naga** — one of the unfavourable positions — where an anchoring aligned to the wall would give Soma, one of the best. Under our anchoring, seven of the eight compass points land on an unfavourable position.

The front door is the heaviest thing in the reading. If our anchoring is right, then most doors genuinely are badly placed and the app is correct to say so. If it should be aligned to the walls, the most important number in every report is wrong. **We cannot settle it from the texts we have read.** Where does your count begin, and against what — the wall, or the compass?

SIDE	AUSPICIOUS	MODERATE / MIXED	INAUSPICIOUS	YOUR RULING
North	Mukhya, Bhallat, Soma	Diti	Roga, Naga, Bhujag, Aditi	
East	Jayanta, Mahendra	—	Shikhi, Parjanya, Bhrisha, Satya, Antariksha (and one unnamed)	
South	Vitatha, Gruhakshata	Pusha	Anila, Yama, Gandharva, Mriga (and one unnamed)	
West	Sugriva, Pushpadanta	Varuna	Pitra, Dauwarik, Asura, Shosha, Papayakshma	

PLEASE RULE

Three more on the entrance.

Two positions have no name in our table — the seventh on the east side and the seventh on the south. What are they called, and how are they graded?

The condemned corner. We flag a single arc as a serious fault: 213.75° to 236.25°, which under our anchoring holds **Yama and Gandharva**. The south-west corner entrance in the Pitra zone is described everywhere as near-universally condemned — but Pitra sits outside our arc. Which positions should the fault cover?

Facing direction carries no score at all. A south-facing home is not penalised; the door's position decides. A south-facing house with a good door outranks an east-facing house with a bad one. Do you agree?

Room placement

Every rule here is marked "derived" unless noted. Not because we doubt them — they are taught by virtually every practitioner — but because we could not find them stated as verses. If you can source any of them, that is the most valuable correction you can make.

ROOM	IDEAL	ACCEPTABLE	RULED OUT	PROV.	YOUR RULING
Kitchen	SE	NW	NE, SW, centre	DER	
Master bedroom	SW	S, W	NE, SE, centre	DER	
Other bedroom	W, NW	N, E, S	SE, centre	DER	
Prayer room	NE	N, E	Nothing	MOD	
Toilet	NW, W	S	NE, SW, centre	DER	
Living room	N, E, NE	W, NW	SW, centre	DER	
Staircase	S, SW, W	NW	NE, centre	DER	
Study	W, NW	N, E, NE	S, SW	DER	
Dining	W	N, E	Nothing	DER	
Store	SW, W, S	—	NE	DER	
Guest bedroom	NW	W	Nothing	DER	
Garage	NW, SE	—	NE, SW	DER	
Balcony	N, E, NE	—	SW	DER	
Basement	Not scored at all. The tradition discourages one outright rather than placing it; the modern schools that permit one disagree about where. We decline to pick a side.			MOD	
Entrance	Judged on the 32 door positions, not on the nine directions. See Section 3.			DER	

PLEASE RULE — THIS CHANGES REAL SCORES

A bathroom carries no rule at all.

The app reads the words printed on a customer's own plan. A room printed **TOILET, WC or WASHROOM** is judged by the toilet rule above, and one in the north-east becomes the most serious fault the app reports. A room printed **BATH or BATHROOM** is judged by nothing. It prints "not rated" and affects the score not at all.

Indian plans print BATH constantly. So two identical rooms receive either our gravest warning or complete silence, decided only by which word the draughtsman used.

Should a washing room be judged like a waste room? If they differ, what is the bathroom's own rule? A washing room in the east is treated kindly by several schools — is that the distinction we should be drawing?

Four more room questions.

The prayer room rules nothing out, including the centre. We follow near-universal modern practice and place it in the north-east, with north and east acceptable. The classical position — Manasara reserves the centre for the family deity — is shown to the reader as the other reading but never scored as a fault. Is declining to condemn the centre the right call?

The centre is ruled out for six rooms and not the rest. A kitchen, a bedroom, a toilet or a living room in the centre is a fault; a study, a store, a dining room or a garage there is not. Should the open centre apply to every room without exception?

Utility rooms, corridors and courtyards are not scored. We have no rule for them. Should we?

There is no classical verse about toilets at all — the texts predate indoor sanitation. Every toilet rule we have is extrapolated from drainage and waste principles. Is that the right extrapolation?

The faults the app reports

Thirty faults. Please strike anything that should not be here. A false alarm damages trust far faster than a missed fault, so we would rather report fewer, accurately.

How severity is used. Major, moderate and minor set how many points a fault costs, capped so no home is reduced to nothing. Anything marked **disputed** is shown to the reader and **never counted in the score**.

FAULT	SEVERITY	PROV.	YOUR RULING — STRIKE, KEEP, OR CHANGE SEVERITY
Toilet in the North-East	Major	DER	
Kitchen in the North-East	Major	DER	
Staircase or heavy weight in the centre	Major	TEXT	
Cut or missing North-East corner	Major	DER	
South-West extension	Major	DER	
Main entrance on the South-West corner	Major	DER	
Master bedroom in the North-East or South-East	Moderate	DER	
Master bedroom in the centre	Moderate	DER	
Bedroom in the South-East	Moderate	DER	
Bedroom in the centre	Moderate	DER	
Kitchen in the South-West	Moderate	DER	
Kitchen in the centre	Moderate	DER	
Toilet in the South-West	Moderate	DER	
Toilet in the centre	Moderate	DER	
Living room in the South-West	Moderate	DER	
Living room in the centre	Moderate	DER	
Staircase in the North-East	Moderate	DER	
Study in the South	Moderate	DER	
Study in the South-West	Moderate	DER	
Store in the North-East	Moderate	DER	
Garage in the North-East	Moderate	DER	
Garage in the South-West	Moderate	DER	
Balcony in the South-West	Moderate	DER	
Prayer room against a toilet, or a room under the stairs	Moderate	DER	

FAULT	SEVERITY	PROV.	YOUR RULING — STRIKE, KEEP, OR CHANGE SEVERITY
Water stored against the mandala — roof tank in the North-East, or sump or borewell in the South-West	Moderate	DER	
A road pointing straight at the plot (Veedhi Shoola) from the S, SW, SE or NW	Moderate	DISP	
Heavy trees in the North-East or the centre	Minor	DER	
A mirror facing the bed, or a beam over a bed or desk	Minor	MOD	
The home is more than twice as long as it is wide	Minor	DER	
Any room in a zone its own rule rules out (the general case)	Moderate	DER	

PLEASE RULE

Two we would particularly like struck or defended.

The mirror and the beam. We searched for a classical basis and found none — no text we examined rules on either. They are included because customers expect them, and labelled as modern rather than ancient. Should they be there at all?

A part of the home sticking out. We treat a north-east, north or east extension as no fault at all, a south-west extension as serious, and south-east, north-west, south and west as a lesser fault. One school holds that *every* extension is negative, the north-east included. Which is right?

Remedies

Our reading of the classical position is that the response to a fault was ritual pacification and structural correction — not an object placed in a corner. We could find no classical concept of a non-demolition gadget remedy at all. Please correct us if that is wrong.

WHAT THE APP OFFERS	RANK	PROV.	YOUR RULING
Change the layout. Move the element. Offered first, above everything else.	1st	TEXT	
Keep the centre open.	2nd	TEXT	
Lighten the North-East, weight the South-West, and sixteen further habit and placement adjustments — where the cook faces, which way a stair ascends, where a bed's head goes.	3rd	DER	
Tulsi. The one plant we treat as genuinely traditional.	4th	DER	
Vastu Shanti. Ritual pacification.	5th	TEXT	
Rock salt, a copper strip, a Vastu pyramid. Ranked last of all, each labelled as twentieth-century practice with no textual basis.	Last	MOD	

PLEASE RULE

What we carry, and what we refuse to.

We ship no crystals, no wind chimes, no yantras and no directional colours. We judged the first three to be modern commercial practice with visible Feng Shui influence, and the colour system to be a modern systematisation. Rivals sell all of them. Are we wrong to leave them out?

Are three gadgets three too many? We keep rock salt, copper and the pyramid because customers expect them, ranked below everything traditional and labelled honestly. Should we drop them entirely?

Vastu Shanti is offered for twenty-nine of our thirty faults. Is it right to offer a general pacification against a specific defect, or does that misrepresent what the rite is for?

Where the schools disagree

Ten disagreements. The app shows the reader both readings and never counts them against the score. Please correct any characterisation of your own school, and add what we have missed.

THE QUESTION	ONE READING	THE OTHER	YOUR RULING
A toilet in the East	A fault — the East is the sun's quarter	Acceptable in the strip nearest the South-East	
A kitchen in the North	Not ideal — Kubera's quarter, read as water against fire	Less than best, but not a fault to correct	
The main bedroom in the West	Acceptable — the other settled, heavier quarter	Advised against by the 16-zone school	
A front door in the South-East	Acceptable on the right position	A fault — Manasara says a home should never face the South-East	
Which way to sleep	Head to the South best, East next, West neutral	Avoid head to the North — the one point every school agrees on	
Which way the idols face	Against the West or South-West wall, so the worshipper faces East	Against the East wall, facing West	
Where a septic tank belongs	North, North-West and South-East are each insisted on by serious sources	Too sharp to rule on — we report it unchecked	
A road pointing at the plot	Harmful only from the S, SW, SE or NW	Any road-arrow wounds the plot, from any direction	
A corner that sticks out	A North-East extension is welcome	Every extension is a fault, the North-East included	
Where the prayer room belongs	Classical — the centre, as Manasara sets out	Modern — the North-East	

Disagreements we have missed

Any further conflict a product like this must handle honestly.

Flats, and what we can honestly offer

Most of our market buys a flat, not a plot — yet almost every Vastu rule is written for an independent house on land.

PLEASE RULE

Three questions about flats.

Which door governs? We apply the 32-position analysis to the flat's own door, the one from the common lobby, rather than the building gate. Is that the consensus?

Does the Brahmasthan mean anything in a flat? We apply it to the flat's own footprint. But a flat has no courtyard, and its centre is often a passage or a wall.

The honest question. A flat owner cannot move the building gate, the lift, the shafts or a shared wall. Does Vastu have anything meaningful to offer them beyond "choose a different flat"? An honest no is more useful to us than a marketable yes.

What we do not check, and say so

Stated here so you can tell us which of these matter enough to build.

NOT CHECKED	SHOULD IT BE?
Ground slope and drainage. The principle that ground falls toward the North-East and water exits at the NE, N or E is one of the most consistent rules across every school we examined — and we do not ask about it at all.	
Soil and site examination. The classical texts cover it at length; modern practice has largely dropped it. Should a pre-construction product revive it?	
Plot shape as a named type — Gaumukhi, Shermukhi. We judge proportion but not the cow-faced / lion-faced distinction.	
Compound wall heights, gate position, number of stair steps, kitchen platform direction, the direction a bed's head points. Each is offered as advice, none is scored, because we never ask for the input.	
Commercial and industrial premises — cash counter, safe, owner's seat, machinery. Out of scope for this version entirely.	

The words the app puts in front of a customer

Every line of text the application shows, with the situation that produces it. The Vastu vocabulary is deliberate and we do not intend to cut it — but if a term is used loosely, or a direction is described in a way a practitioner would not recognise, that is a correction we very much want. The final column is for your comments.

How to read this. "Kind" says whether the line is a heading, a button, an error and so on. Lines marked *accessibility* are never seen — they are read aloud to a person using a screen reader. Shaded rows are ones we already have a question about.

1. Welcome (the first screen a new user ever sees)

When you see it: On a fresh install, and any time the user has no saved homes and no half-finished homes — the app skips the saved-homes list and opens straight here. Also reached by tapping "Add a home" on the saved-homes screen.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
NO SIGN-UP · NO PHONE NUMBER	label <i>Always. Written in the code as "No sign-up · No phone number"; the section-label component forces it to capitals on screen.</i>	
See your home's Vastu — and exactly what to do about it.	heading <i>Always — the biggest text on the first screen.</i>	
Upload or draw your plan. Mark North. See your score and what to do.	body <i>Always.</i>

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Off	label <i>The value at the right of that row when the user has never agreed, or has switched it back off.</i>	
Privacy	label <i>Always — opens the privacy policy inside the app.</i>	
Honesty & sources	label <i>Always — opens the page explaining how each Vastu rule is tagged.</i>	
Delete all my data	label <i>Always — shown in red. Opens a confirmation box.</i>	
>	label <i>Shown at the right of the Privacy, Honesty & sources and Delete all my data rows.</i>	
No account, no phone number. Only a plan you upload ever leaves your phone.	body <i>Always — the grey line under the data section.</i>	
SOMETHING WENT WRONG	label <i>Only when the app crashed the last time it was used. Written as "Something went wrong".</i>	
The app crashed last time. Emailing us what happened helps us fix it. You read it first, and it says nothing about you or your homes.	body <i>Same condition — only after a crash.</i>	
Send what went wrong	button <i>Only after a crash. Opens the phone's email app with the report already written.</i>	
No thanks	button <i>Only after a crash. Deletes the report and the section never comes back for that crash.</i>	
VastuFirst — something went wrong	body <i>The subject line of the crash email, already filled in when the user's email app opens.</i>	
Anything you were doing when it happened (optional):	body <i>The first line of the crash email body, above two blank lines and then the technical detail.</i>	
--- technical detail, nothing personal ---	body <i>The separator line in the crash email, above the technical text.</i>	
Delete all your data?	heading <i>After tapping "Delete all my data".</i>	
This permanently removes every saved home from this device, and any plan you photographed. It can't be undone.	body <i>In that confirmation box.</i>	
Keep my data	button <i>The safe choice in the delete box.</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Delete everything	button <i>The destructive choice. Wipes every saved home, every half-finished home and every photographed plan, with no undo.</i>	

5. Honesty & sources

When you see it: After tapping "Honesty & sources" in Settings. Not reachable any other way, so a user who has not yet saved a home can never see the disclaimer.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Back	accessibility <i>Spoken label of the ◀ chevron.</i>	
Honesty & sources	heading <i>Always.</i>	
Vastu is a traditional practice. This is guidance for your own decisions — not a guaranteed outcome.	body <i>Always — the boxed disclaimer at the top.</i>	
HOW WE TAG EVERY RULE	label <i>Always. Written as "How we tag every rule".</i>	
From classical text	label <i>Always — the first coloured tag.</i>	
Traceable to a named source, with citation.	body <i>Always — under the first tag.</i>	
Traditional practice	label <i>Always — the second coloured tag.</i>	
Reasoned from the mandala; widely taught.	body <i>Always — under the second tag.</i>	
Modern practice	label <i>Always — the third coloured tag.</i>	
20th-century. Honesty about age, not a warning.	body <i>Always — under the third tag.</i>	
Schools disagree	label <i>Always — the fourth coloured tag.</i>	
Two readings shown, neither chosen for you.	body <i>Always — under the fourth tag.</i>	
We never use fear, urgency, or promises of wealth, health or fortune. Where the tradition contradicts itself, we show you both sides.	body <i>Always — the closing paragraph.</i>	

6. Privacy (the policy, inside the app)

When you see it: Two ways in: the quiet "Privacy" link under Continue on the very first screen, and the "Privacy" row in Settings.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Back	accessibility <i>Spoken label of the ‹ chevron.</i>	
Privacy	heading <i>Always.</i>	
Your homes never leave your phone.	heading <i>Always — the boldest line on the page, in a green-accented card at the top.</i>	
Everything you draw, every score and every report is worked out on this device and saved only on this device. There is no account, no sign-up and no phone number.	body <i>Always — under that headline.</i>	
WHAT WE COLLECT	label <i>Always. Written as "What we collect".</i>	
Nothing about you. We do not ask for your name, email, phone number or location, and the app has no account to sign in to. The homes you draw, their scores and their reports are stored only in the app's own private storage on your phone, where no other app can read them.	body <i>Always.</i>	
THE ONE THING THAT LEAVES YOUR PHONE	label <i>Always. Written as "The one thing that leaves your phone".</i>	
If you choose to have a floor plan read for you, that one picture is sent to an AI service to be turned into rooms, and the rooms come back. The app asks you before it does this, every first time, and you can turn it off again in Settings. The picture is not stored by us and is not linked to you — there is nothing to link it to. Drawing your home by hand needs no internet at all and gives the same score.	body <i>Always.</i>	
WHEN THE APP CRASHES	label <i>Always. Written as "When the app crashes".</i>	
If the app closes unexpectedly, it writes what went wrong into its own private storage and offers to email it to us the next time you open it. Nothing is sent unless you press send, and you can read the whole message first. It contains only technical detail, your phone model and the app version — never your homes, your scores or anything about you.	body <i>Always.</i>	
IF YOU BUY THE FULL REPORT	label <i>Always. Written as "If you buy the full report".</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Payment is handled entirely by Google Play. We never see or store your card, and the app does not receive your payment details at any point. Google tells us only that this device has bought the report.	body <i>Always.</i>	
DELETING EVERYTHING	label <i>Always. Written as "Deleting everything".</i>	
Settings → Delete all my data removes every saved home from this device immediately and permanently. Uninstalling the app removes everything too. Because nothing is stored on our side, there is nothing left for us to delete and nothing you need to ask us for.	body <i>Always.</i>	
CHILDREN	label <i>Always.</i>	
VastuFirst is not aimed at children and collects nothing from anyone, of any age.	body <i>Always.</i>	
CONTACT	label <i>Always.</i>	
Questions about privacy, or anything else: contact@vastufirst.com .	body <i>Always.</i>	
Last updated 1 August 2026.	body <i>Always — the last line on the page.</i>	

7. A few more things (the optional extra questions)

When you see it: Only by tapping the button on the report that offers to check more — it is never forced, and a user who never opens their report never sees it.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
OPTIONAL	label <i>Always — the first thing on the screen, above the title. Written as "Optional".</i>	
Back	accessibility <i>Spoken label of the < chevron next to the title.</i>	
A few more things	heading <i>Always.</i>	
So far we scored your rooms, front door and shape. Answer these to check more. Skip what you don't know — we say so, we don't guess.	body <i>Always.</i>	
Water tank on the roof	heading <i>Always — first question.</i>	
The overhead tank. Best in the south-west or west; the north-east is the one to avoid.	body <i>Always — help text under the first question.</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Underground tank, sump or borewell	heading <i>Always — second question.</i>	
Water kept below ground. Best in the north-east; the south-west is the one to avoid.	body <i>Always — help text under the second question.</i>	
A big, heavy tree	heading <i>Always — third question.</i>	
A large tree close to the home. The north-east and the centre are the places it weighs on.	body <i>Always — help text under the third question.</i>	
A road pointing straight at your home	heading <i>Always — fourth question.</i>	
A road that ends at your home rather than passing it — a T-junction or a dead end.	body <i>Always — help text under the fourth question.</i>	
Which direction is it in?	body <i>Under each question, before it has been answered.</i>	
It's in the north-east.	body <i>Replaces the line above once a direction is chosen. The direction is whichever button was tapped, in lower case — "It's in the north.", "It's in the south-west.", and so on for all eight.</i>	
There isn't one.	body <i>Replaces the line above when the user taps the "There isn't one" button.</i>	
North / North-East / East / South-East / South / South-West / West / North-West	button <i>The eight direction buttons under every question, in compass order.</i>	
There isn't one	button <i>The ninth button under every question.</i>	
Done — back to my report	button <i>Always, at the bottom. Returns to the report the user came from.</i>	
Every answer is saved as you tap it.	body <i>Always — the grey line under the button.</i>	

8. Report — "What this covers" section

When you see it: On the report screen for every home, near the bottom. The wording changes with how many of the four extra questions have been answered.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
WHAT THIS COVERS	label <i>Always on the report. Written as "What this covers".</i>	
Your rooms, your front door and your home's shape. We haven't looked at your water tank, trees or the road outside.	body <i>When none of the four extra questions has been answered — which is every home until the user goes looking.</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Your rooms, your front door, your home's shape, and 2 of 4 extra things you told us about.	body <i>When some but not all of the four extra questions have been answered. The numbers are real.</i>	
Your rooms, your front door, your home's shape — and the 4 extra things you told us about.	body <i>When all four extra questions have been answered.</i>	

9. Date wording (used on every row of the saved-homes list)

When you see it: After the "." on every finished home, every half-finished home, and every home that cannot be opened. It follows the calendar day, so an app left open past midnight updates itself.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
today	body <i>When the home was last touched on the same calendar day. Also shown if the phone's clock is set ahead and the saved time looks like the future.</i>	
yesterday	body <i>When the home was last touched on the previous calendar day.</i>	
3 days ago	body <i>Two to six calendar days ago — "2 days ago" through "6 days ago".</i>	
3 Jul	body <i>Seven or more days ago, within the current year.</i>	
3 Jul 2025	body <i>Seven or more days ago, in a different year from today.</i>	

10. Before we start — consent to send your plan

When you see it: The gate immediately before the upload screen. Shown the first time the user chooses to have a plan read, and again any time the permission has been switched off in Settings or the consent version was bumped. Nothing can reach the internet until this screen is answered.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Before we start	label	
Your plan leaves this phone	heading	
Everything else happens on your phone. Reading a plan does not — so here is exactly what happens.	body	
What we send	label	
The one picture or PDF you choose. Nothing else — no name, no phone number, no location.	body	
Who reads it	label	
A relay called OpenRouter passes it to an AI model from OpenAI — and sometimes a second one from Google for a second opinion. Their computers are abroad.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
What we ask it	label	
Only to read what is printed on your plan — the room names and sizes, and where each room sits. It is never asked anything about Vastu.	body	
What we keep	label	
Nothing. Your plan is not stored by us, and it stays in your phone's own storage.	body	
Who works out your score	label	
Your phone does, on its own, exactly as it does for a home you draw by hand.	body	
You can turn this off again at any time in Settings.	body	
I agree — read my plan	button	
Rather not?	heading	
Draw your home on the grid instead. It takes a few minutes, nothing leaves your phone, and the score is exactly the same.	body	
Draw it on a grid instead	button	
Back	button	

11. Upload your plan (the starting state)

When you see it: After the consent screen is agreed to. This is the first scan screen — nothing chosen yet.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Upload your plan	heading	
We read the room names so you don't type them. You place and check every room before anything is scored.	body	
Choose a PDF or picture	button	
Take a photo of it now	button <i>Greyed out and unusable once the phone has shown it has no camera app</i>	
No camera app on this phone. Choose a picture or PDF above — it reads better anyway.	body <i>Only after the user has tapped "Take a photo of it now" on a phone with no camera app (an emulator, a stripped ROM)</i>	
What works best	heading	
• The PDF your architect or builder sent, or a clear screenshot of it.	body	
• A flat, top-down plan — not a 3D picture of the finished home.	body	
• Room names printed on the plan, like KITCHEN or BEDROOM.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
• One home per picture. If the sheet shows several flats, crop to yours.	body	
If you photograph a printed plan, hold the phone flat above it. A picture taken at an angle is the one thing we struggle with.	body	
Rather not upload anything?	heading	
Drawing on the grid takes a few minutes, stays on your phone, and gives exactly the same score.	body	
Draw it on a grid instead	button	
Back	button <i>Sits at the foot of this screen in every one of its states — idle, reading, results, refusal, busy, offline, bad file, and the no-reader build</i>	

12. Reading your plan (the wait)

When you see it: From the moment a file or photo is handed over until an answer comes back. Nothing on this screen moves — there is no spinner — so the words are the only sign the app is alive.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Reading your plan...	heading	
This usually takes a few seconds.	body <i>For the first 8 seconds of the wait</i>	
Still reading — a detailed plan can take up to a minute.	body <i>Once the wait passes 8 seconds</i>	
Taking a second look at your plan.	body <i>Once the wait passes 35 seconds</i>	

13. We read N rooms (the app worked out where the rooms are)

When you see it: A reading came back that the app trusts enough to place the rooms itself — the good outcome. The user checks the list, then goes to the North dial.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We read <number> rooms	heading <number> is filled in with the count of rooms read	
We've put them roughly where they appear on your plan. Mark North, then check each one — nothing is scored until you say it's right.	body	
Tap any room to change what kind of room it is.	body	
Next — which way is North?	button	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Try a different picture	button	

14. We found N rooms (the app could not place them — the user must)

When you see it: A reading came back with good room names but placement the app does not trust. This is the outcome most real Indian plans land in. The user checks the list, then drags each room onto a grid.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We found <number> rooms	heading <i><number> is filled in with the count of rooms read</i>	
We read every room name, but we can't trust where each one sits — and we don't guess. Drag each one to its real place.	body <i>Reason: too many rooms for the reader to keep track of</i>	
This sheet shows a whole floor, not one home. Drag the rooms that are yours to where they belong.	body <i>Reason: the sheet names a lift, so it is a whole building floor rather than one home</i>	
We read the room names but not where they sit — and we don't guess. Drag each one to its real place.	body <i>Reason: too few rooms survived to be worth placing</i>	
We read the room names, but the shapes came back identical — not really measured. Drag each one to its real place.	body <i>Reason: every rectangle came back the same size, so the shapes were invented rather than measured</i>	
The picture looked angled, so we kept the room names and threw the shapes away. Drag each one to its real place.	body <i>Reason: the reader judged the photo to be taken at an angle, and the user tapped "Show me what you read" on the refusal screen</i>	
Tap any room to change what kind of room it is.	body	
Place them on the grid	button	
Try a different picture	button	

15. Card: N rooms won't fit on the grid

When you see it: Added today. Appears on the found-rooms screen only when the reading has more rooms than the drawing grid can physically hold (the grid holds 25). Until this card existed those rooms simply vanished between one screen and the next.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
1 room won't fit on the grid	heading <i>Exactly one room is over the limit</i>	
<number> rooms won't fit on the grid	heading <i>More than one room is over the limit; <number> is filled in</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The grid holds <capacity> rooms and your plan has <total>. Not on it: <room names, comma separated>.	body <capacity>, <total> and the list of names are filled in from the reading	
A room that is not on the grid is not scored. Make space on the next screen and add it yourself.	body Exactly one room is over the limit	
A room that is not on the grid is not scored. Make space on the next screen and add them yourself.	body More than one room is over the limit	

16. Card: We also saw, but didn't add

When you see it: On either reading-result screen, whenever the reader saw a space it could not carry through — an unrecognised name, something too small, a shape it could not make sense of, or a room overlapping another. Spaces the app deliberately never scores (ducts, shafts, lifts, dressing areas) are filtered out and never shown here.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We also saw, but didn't add	heading	
• <name printed on the plan> — we didn't recognise the name	body The printed caption matched none of the room names the app knows	
• <name printed on the plan> — it was too small to place on the grid	body The space rounded down to nothing on the grid	
• <name printed on the plan> — we couldn't make sense of its shape	body The shape came back broken or outside the plan	
• <name printed on the plan> — it overlapped another room	body The space sat on top of a room the reader was more sure about	
it isn't a room we score	body Written in the app for spaces like ducts and lifts, but filtered out before display — no user ever sees this line	
If any of these is a real room, add it yourself on the next screen.	body Only when the next screen is the drawing grid, i.e. on the found-rooms outcome	
If any of these is a real room, draw your home on a grid instead — this reading cannot add it.	body Only on the outcome where the app placed the rooms itself, because that path never opens the grid	

17. One room in the list, and changing what kind it is

When you see it: Every row of either reading-result screen. Tapping a row opens the full list of room kinds so the user can overrule what the app decided a room is.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
CHECK	label <i>On a room whose shape was cut back because it overlapped another, or whose printed name only loosely matched a name the app knows</i>	
Change	label	
We read "<name printed on the plan>" as <room kind>, <printed size>. Please check this one.	accessibility <i>Spoken by a screen reader for each room row; the size is dropped when the plan printed none, and "Please check this one." only appears on a flagged room</i>	
change the room type	accessibility <i>The action a screen reader announces for the row</i>	
Change room type	button <i>The closed state of the room-kind picker — on this screen the picker is always opened by the row, so this label is only reached elsewhere in the app</i>	
Change room type. Currently <room kind>.	accessibility	
<room kind>, the current room type	accessibility <i>Spoken for the chip of the kind the room already is</i>	
Change to <room kind>	accessibility <i>Spoken for every other chip</i>	

18. We couldn't read your plan (refusal)

When you see it: The reader came back and said the picture cannot be used at all. Five different reasons, each with its own wording, and one of them has a second version when a usable room list came back anyway.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
This looks like a tilted 3D view	heading <i>Reason: the reader judged the picture to be taken at an angle rather than straight down</i>	
We read it as an angled picture rather than a flat plan — but we did get room names off it. Have a look.	body <i>Angled-picture refusal, and the same reply did come back with room names on it</i>	
Rooms seen at an angle can't be measured. Please send the flat, top-down plan — a colourful, furnished one is fine.	body <i>Angled-picture refusal with no usable room names behind it</i>	
That doesn't look like a floor plan	heading <i>Reason: the picture is not a floor plan at all</i>	
We couldn't find a floor plan in that picture. It might be an elevation, a brochure page or a site map. Please upload the flat, top-down plan.	body <i>Reason: the picture is not a floor plan at all</i>	
We can't see the room names	heading <i>Reason: the rooms on the plan are not named, or the names are too small to read</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The rooms on this plan aren't named, or the names are too small to read. Please upload a plan with the rooms named — or draw your home instead, which takes a few minutes.	body <i>Reason: no readable room names</i>	
There's more than one home on this sheet	heading <i>Reason: the sheet shows several flats</i>	
This sheet shows several flats. Please crop the picture to just your own home and try again.	body <i>Reason: several homes on one sheet</i>	
We couldn't pick out any rooms	heading <i>Reason: it is a proper labelled plan, but nothing on it came through as a room the app recognises</i>	
The plan looks right, but nothing on it came through as a room we recognise. A clearer picture often fixes it.	body <i>Reason: no rooms recognised</i>	
Show me what you read	button <i>Only on the angled-picture refusal, and only when a usable room list came back with it</i>	
Try a different picture	button	
Draw it on a grid instead	button	

19. We're busy right now (too many people scanning)

When you see it: The reading service refused because too many plans are being read at once across everyone using the app. Expected and temporary, not a fault of the user's plan.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We're reading a lot of plans right now	heading	
Your plan is fine — we're just busy. Please try again in a minute. Or draw your home on the grid — it works now, no internet needed.	body <i>The service gave no wait time</i>	
Your plan is fine — we're just busy. Please try again in about <number> seconds. Or draw your home on the grid — it works now, no internet needed.	body <i>The service gave a wait time of 60 seconds or less</i>	
Your plan is fine — we're just busy. Please try again in about <number> minutes. Or draw your home on the grid — it works now, no internet needed.	body <i>The service gave a wait time over 60 seconds</i>	
Try again	button	
Draw it on a grid instead	button	

20. Our reader didn't answer (service down, timed out, or the phone is offline)

When you see it: Every failure that is not a rate limit lands here — the reading service timing out, being down, or a bad key — and so does a phone with no internet. The app cannot tell these

apart.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Our reader didn't answer in time	heading	
That is usually us, not you — try again in a moment. If your phone is offline, reading a plan needs a connection, but drawing your home on the grid does not.	body	
Try again	button	
Draw it on a grid instead	button	

21. We couldn't open that file

When you see it: The chosen file could not be turned into a picture at all — a corrupt file, or a password-protected PDF. Nothing was ever sent.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We couldn't open that file	heading	
The picture or PDF wouldn't open. If it's a PDF, check it isn't password-protected, or take a screenshot of the page and upload that instead.	body	
Choose another file	button	
Draw it on a grid instead	button	

22. This copy of the app can't read plans

When you see it: A build shipped without the key that lets it call the reading service. The screen deliberately refuses to look like a working one — there is no file chooser on it at all.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
This copy of the app can't read plans	heading	
Plan reading is switched off in this version, so there's nothing behind the upload button. It isn't your plan or your phone. Drawing your home on the grid works normally and gives exactly the same score.	body	
Draw it on a grid instead	button	

23. Which way is North?

When you see it: Straight after a successful reading, before the checking screen. On the scan path the user's own plan photo sits inside the dial. There is no phone-compass option — North is always set by hand.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Which way is North?	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Drag the N dial, or use the slider. Everything else follows from this.	body	
Floor plan compass. North at <number> degrees. Drag to set North.	accessibility	
Ideal	label

These are my rooms — set the front door	button <i>When the plan did not name its entrance, so the door screen comes next</i>	
Put the front door somewhere else	button <i>Only when a door is already known and at least one room was read</i>	

25. Check what we read — when the picture or the whole reading is gone

When you see it: Two different failures on the same screen. Either the photo could not be decoded but the rooms survived, or the phone reclaimed the app's memory while it was working and the entire reading — photo and rooms — is gone.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The photo could not be shown	heading <i>The picture failed but the room list survived</i>	
Every room we read is still listed below, and your score still works.	body <i>The picture failed but the room list survived</i>	
Your reading was lost	heading <i>The phone reclaimed the app's memory mid-flow — the user comes back to nothing</i>	
Your phone needed the memory back while we were working. Nothing was saved, so please read your plan again.	body <i>The phone reclaimed the app's memory mid-flow</i>	
Scan your plan again	button <i>Shown instead of the confirm button when the reading was lost, so nobody can confirm a home with no rooms in it</i>	

26. Where is your front door?

When you see it: Only when the plan did NOT name its own entrance, or when the user tapped "Put the front door somewhere else". A ring travels around the outline of the home until a door is marked. On the scan path this is the last screen before the report.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Back	accessibility	
Where is your front door?	heading	
Tap the wall you walk in through. Of everything we read, this changes your score the most.	body	
Your plan. Tap the wall your front door is on.	accessibility <i>Spoken for the plan picture before a door is marked</i>	
Your plan. Your front door is marked on <the top / bottom / left / right wall of your plan>.	accessibility <i>Spoken for the plan picture once a door is marked</i>	
The photo could not be shown	heading <i>The plan picture could not be decoded</i>	
You can carry on without marking the door — we will say so on your score.	body <i>The plan picture could not be decoded</i>	
Your front door	label	
Not marked yet. Tap your plan where you come in.	body <i>No door marked</i>	
Marked on <the top / bottom / left / right wall of your plan>. Tap somewhere else to move it.	body <i>A door is marked</i>	
Read my home	button <i>In the normal flow, with a door marked</i>	
Skip the door — read my home	button <i>In the normal flow, with no door marked</i>	
Done — back to my report	button <i>Reached from a finished report, with a door marked</i>	
Leave the door out — back to my report	button <i>Reached from a finished report, with no door marked</i>	

27. The words the app uses for directions, rooms and walls throughout this flow

When you see it: Not a screen — the shared vocabulary that fills the blanks on every screen above: direction pills, room names, room-kind chips, the code inside each room's circle, and the front door's wall.

Corridor	label	
<room kind> <number>	label <i>The fallback name when the plan printed no caption for a room and the home has more than one of that kind — for example "Bedroom 2"</i>	
EN / K / MB / BR / GB / PJ / T / B / L / D / ST / SD / SR / G / BL / BM / CY / U	label <i>The short code inside each room's coloured circle on the checking screen, one per room kind</i>	

28. The engine's own notes strip

When you see it: A quiet coloured strip that can appear alongside a reading, carrying plain-language notes produced by the scoring engine itself — an unusual shape, an off-compass tilt, a long-and-narrow home. The app writes none of these words; it prints whatever the engine hands it, word for word.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
<the engine's own note, printed exactly as the engine produced it>	body <i>Whenever the engine attaches a note to a reading; the strip disappears entirely when there are none</i>	

29. Drawing editor — the heading and the line under it

When you see it: Every time someone lays out their home on the grid — by hand, or after a plan scan. Both lines swap depending on what the person is doing at that moment.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Mark your front door	heading <i>The front-door step is open</i>	
These rooms aren't placed yet	heading <i>The rooms came off a plan scan that could not work out where they go, so they sit in a parking row</i>	
Place your rooms	heading <i>Ordinary drawing</i>	
Your home is outlined below. Tap the wall where your front door is.	body <i>Front-door step</i>	
Drag the room to move it, or pull a corner to resize.	body <i>A room is selected</i>	
Press the plan where this room goes. Slide to adjust, lift to place.	body <i>A room kind has been armed from the palette</i>	
Pick a room below, then press the plan to place it.	body <i>No rooms placed yet</i>	
We read these rooms but not where they go. Drag each one to its real place.	body <i>Rooms parked after a scan</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Press a room and slide to move it, or add another below.	body <i>Rooms placed, nothing selected</i>	

30. Drawing editor — carrying on an unfinished home

When you see it: Someone picks an unfinished home off the saved-homes list and lands back in the editor.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Carrying on with your unfinished home	heading <i>Restored from a draft and at least one room exists</i>	
Your home, exactly as you left it. Carry on, or start it again.	body	
Start this home again	button	

31. Drawing editor — the plan itself and its compass

When you see it: Always on screen while drawing. The four compass words sit outside the grid; the rest is what a screen reader hears.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
NORTH	label	
WEST	label	
SOUTH	label	
EAST	label	
Kitchen, 2 by 3 cells, South-East	accessibility <i>Spoken for every placed room; the pattern is "<kind>, <width> by <height> cells, <direction>"</i>	
Selected	accessibility <i>Spoken state of the room a finger last touched</i>	
Not selected	accessibility	
Front door on the north wall	accessibility <i>Spoken for the door marker; the wall word is north / east / south / west</i>	
D	label <i>The gold badge drawn on the front door marker</i>	

32. Drawing editor — while a room is being dragged or placed

When you see it: A finger is down and moving a room, resizing it, or dropping a brand-new one.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Rooms can't overlap	error <i>The dragged or ghosted room is sitting on top of another one</i>	
Kitchen · 2×3 · South-East	label <i>The floating readout while a room is moving; pattern is "<kind> · <w>×<h> · <direction>"</i>	
Placing: Kitchen	label <i>A room kind is armed and waiting to be pressed onto the plan</i>	
Stop placing Kitchen	accessibility <i>The X on the placing bar</i>	
×	button <i>Cancels placing</i>	

33. Drawing editor — "is this part of your home?"

When you see it: Directly under the plan, once rooms are placed and nothing is selected. This is the question that decides whether the home is scored as an L-shape or as a full rectangle.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Once your rooms are where they belong, we'll ask about any missing corners.	body <i>Rooms are still parked after a scan</i>	
Is this part of your home?	heading <i>An empty patch shaped like a missing corner has been found</i>	
The 3 squares marked on the plan are in the north-east, with no room on them. If your home is cut off there — an L-shape, a missing corner — say so and we'll score the real shape.	body <i>Same; "1 square ... is ... it" in the singular</i>	
Yes — it's part of my home	button	
No — my home is cut off there	button	
Your home is cut off in the north-east and south	heading <i>After at least one patch has been cut away</i>	
We're scoring your home's real shape.	body	
Start the shape again	button	
There's an empty space inside your home	heading <i>An empty patch is completely surrounded by rooms</i>	
It's surrounded by rooms, so it's part of your home. If it's open to the sky, add it as a Courtyard — the centre of a home matters in Vastu.	body	
Empty squares between rooms count as part of your home — most homes have passages there.	body <i>Loose space wraps around the rooms and cannot be cut away</i>	
We treat your home as a full rectangle. If a corner is missing, leave it empty — we'll ask.	body <i>Nothing to ask about yet</i>	

34. Drawing editor — plot size, the room palette and the door button

When you see it: The block of controls under the plan whenever no room is selected and no kind is armed.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Plot size	label

38. Report — the wait before the report appears

When you see it: Roughly one and a half seconds after the North dial is set, every time a report is opened fresh.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Reading your home	heading	
Every room on the traditional grid, weighed against the rules.	body	

39. Report — when there is nothing to show

When you see it: The report is where the whole flow now lands, so these are the dead ends a reader can still reach — usually after the phone reclaimed the app in the background.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Reading your home...	empty-state <i>Rooms and the first answer both present, engine still running (about 50 milliseconds)</i>	
One answer went missing	heading <i>Rooms survived but the "what brings you to Vastu" answer did not</i>	
Your rooms are safe. Tell us again what brings you to Vastu.	body	
Answer the first question	button	
Pick up where you left off	heading <i>Nothing on screen and nothing computed</i>	
This plan may have closed in the background. Open it from your saved plans.	body	
Go to my plans	button	
Finish your plan	heading <i>The engine judged the plan too incomplete to score</i>	
Add rooms and your front door, and we'll read it.	body <i>Fallback when the engine supplied no note of its own</i>	
Change your plan	button	

40. Report — the opening verdict

When you see it: The first thing on the report, above every finding, free and paid alike.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Full report	label <i>Paid</i>	
Your report	label <i>Not yet paid</i>	
BUILDING	label <i>The reader said they are building</i>	
BUYING	label <i>The reader said they are buying</i>	
ALREADY LIVING HERE	label <i>The reader said they already live there</i>	
6.4	label <i>The score, always one decimal place, the decimal mark taken from the phone</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
/ 10	label	
Strong	label <i>Score 75 or above out of 100</i>	
Workable	label <i>Score 50 to 74</i>	
Needs work	label <i>Score below 50</i>	
Reads well throughout — no defect the tradition counts.	body <i>Score 75+ and no defects</i>	
Most of this home reads well.	body <i>Score 75+ with defects</i>	
Workable, with real problems to address.	body <i>Score 50–74</i>	
Several core placements work against this home.	body <i>Score below 50</i>	
All fixable without moving a wall.	body <i>Appended when the reader is buying or already living there and the home has at least one defect</i>	
Nothing is built yet — every change below is free.	body <i>Appended when the reader is building and the home has at least one defect</i>	
Entrance, kitchen and toilets are below in full, free.	body <i>Appended for anyone who has not paid</i>	

41. Report — how your rooms read (the balance bar)

When you see it: Directly under the score, before any problem is named.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
How your rooms read	label	
already right	label	
not ideal	label	
need fixing	label	
Of the rooms the tradition rates: 7 already right, 2 not ideal, 1 need fixing.	accessibility <i>Spoken as one sentence; the middle and last clauses drop out when their count is zero</i>	

42. Report — the picture of your home and the way back into it

When you see it: Under the balance bar, once at least one room exists or a scanned plan is attached.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Your home, as we read it	label	
Your plan with Vastu zones, North at 0 degrees.	accessibility <i>On the drawn zone dial, for a home laid out by hand</i>	
Your scanned plan. Tap a room to see roughly where we read it.	accessibility <i>On the photograph, for a home that arrived by scan</i>	
Your plan, showing roughly where Kitchen was read	accessibility <i>On each tappable room over the photograph</i>	
Not right? Change it; your score follows.	body	
Change which way North is	button	
Change where the front door is	button	

43. Report — start here

When you see it: The single highest-ranked problem, lifted above the room list. Always free, even when the problem it names is one the pay bar counts as locked.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Start here	label	
Kitchen — North-East	heading <i>Pattern is "<room name> — <direction>"; a problem with no room behind it reads "North-East — structure"</i>	
Of those ranked below, this moves your score most.	body	
Do this first	label	
Move the kitchen to the South-East. If that corner is already taken, the North-West is the classical second choice.	body <i>The reader is building — the layout change is shown</i>	
Wherever the kitchen ends up, set the cooking platform against that room's South-East corner. Stand facing East to cook. The tradition fixes the hearth's own direction, not only the room's. (Traditional practice)	body <i>The reader is buying or already living there — the first remedy is shown instead</i>	

44. Report — your front door

When you see it: Its own block before the room list, always free, on every report that has a door.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Your front door	label	
Favourable	label <i>Badge on the door card</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Middling	label	
Read both ways	label	
Unfavourable	label	
Front door — north wall	heading <i>Pattern is "Front door — <wall> wall"</i>	
Position 20 of 32 · Yama — Death, disease	body <i>Pattern is "Position <n> of 32 · <name> — <what it governs>", taken straight from the 32-position table</i>	
Position 15 of 32 · Antariksha	body <i>The position is named but the sources record nothing about what it governs</i>	
Position 14 of 32	body <i>Two of the 32 positions have no recorded name</i>	
The classical sources leave this position unnamed. We say so rather than invent a name; the reading is unaffected.	body <i>Only on those two unnamed positions</i>	
Purva, the quarter of Indra. In the tradition: Vitality, social standing.	body <i>The meaning of the wall the door sits on; pattern varies by direction</i>	
The tradition lays 32 named positions around the plan's edge, eight per wall, and reads the entrance by the one it stands on. Yours is one the tradition counts favourable — and the front door outweighs any single room.	body <i>The middle clause is one of: "one the tradition counts favourable" / "one the tradition counts middling" / "one the sources read both ways" / "one the tradition counts unfavourable"</i>	
Only two or three positions per wall count favourable, so a door moved a few feet along the same wall reads differently. Worth raising while it is still on paper.	body <i>The door is not favourable and the reader is building</i>	
Only two or three of the eight positions on any wall count favourable — the exact spot along the same wall matters.	body <i>The door is not favourable and the reader is buying or already living there</i>	
Your doorway spans two positions; it is read on the one it mostly sits on.	body <i>The doorway straddles two of the 32</i>	

45. Report — your rooms, worst first

When you see it: The main body of the report. One row per room, ranked; tapping a row opens its reasoning and marks it on the picture above.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Your rooms (11)	label <i>The count is every room, including ones the tradition does not rate</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Worst first. Tap one for where and why.	body	
Already right	label <i>Row pill — the room is ideal or acceptable</i>	
Not ideal	label <i>Row pill</i>	
Needs fixing	label <i>Row pill</i>	
Not rated	label <i>Row pill — the tradition does not place this kind of room</i>	
South-East	label <i>Direction pill on the row; the centre reads "Centre"</i>	
v	label <i>Row is closed</i>	
^	label <i>Row is open</i>	
show this room on the plan and read why	accessibility <i>Spoken action on a closed row</i>	
close this room	accessibility <i>Spoken action on an open row</i>	
Reasoning and remedies — in the full report	body <i>The row belongs to a room that is not the entrance, the kitchen or a toilet, and the reader has not paid</i>	
The tradition does not place this kind of room, so we have not judged it — neither a problem nor an approval.	body <i>A corridor, balcony, basement and so on</i>	
Read in full under “Your front door” above, on the tradition’s 32 named positions — finer than the eight directions a room gets. Not scored twice.	body <i>The entrance room's own row</i>	
This is exactly where the tradition puts a kitchen.	body <i>An ideal room; the room word is the prose name</i>	
This is a direction the rule accepts for a bedroom.	body <i>An acceptable room whose rule names no first choice</i>	
Not the first choice, but a direction the rule accepts for a kitchen — the first choice is the South-East.	body <i>An acceptable room whose rule does name a first choice</i>	
The South is not wrong for a study, and not right either — the tradition puts one in the West or the North-West.	body <i>A room rated not ideal</i>	
This rule names no preferred direction for a dining room, so the North is neither right nor wrong for it.	body <i>A not-ideal room whose rule names nothing at all</i>	

46. Report — an opened problem

When you see it: Any room row or structural card the reader taps open, once the reasoning is unlocked.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
From classical text	label <i>Provenance tag on a rule traced to a named treatise</i>	
Traditional practice	label <i>Provenance tag on a rule reasoned from tradition rather than quoted from it</i>	
Modern practice	label <i>Provenance tag on a 20th-century rule</i>	
Schools disagree	label <i>Provenance tag on a contested rule</i>	
Ishanya, the quarter of Ishana / Shiva, the element of water. In the tradition: Clarity, health. The Purusha's head — most sensitive and most auspicious.	body <i>The direction's own meaning, shown above the reason on every opened finding</i>	
Brahmasthan, Brahma's own square, the element of space. In the tradition: Must stay open. Reserved for the family deity.	body <i>When the finding sits on the centre</i>	
Ishanya · Ishana / Shiva	label <i>The one-line sub-heading under a structural finding's title</i>

47. Report — your home's shape and surroundings

When you see it: Below the room list, when a problem has no room behind it — a cut corner, an extension, a water tank, the road outside, the centre of the home.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Your home's shape and surroundings	label	
North-East — structure	heading <i>Every finding in this section</i>	

48. Report — where the schools disagree

When you see it: Near the bottom of the report, whenever the reader's home touches a question the traditions answer differently. This is the section that carries the product's whole promise of even-handedness.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Where the schools disagree	label	
Both readings, no winner, and which your score follows.	body	
What your score uses	label <i>Only on disputes the app has actually ruled on</i>	

49. Report — we couldn't check these

When you see it: Below the disputes, listing rules the app could not run because it lacks a detail about the site.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
We couldn't check these	label	
Neither passed nor failed — we lacked details.	body	
· Where your water tank and borewell sit	body	
· Whether a road points straight at your plot	body	
· Where the large trees on your property stand	body	
· Mirrors facing a bed, or a beam running over one	body	
Tap "Answer a few more and check more" on your report and tell us, and we will check this.	body <i>Printed once, covering the water, road and tree rules</i>	
We do not check this one. It needs a look inside the room, which a plan cannot show, so we would rather say so than guess.	body <i>The mirror and beam rule only</i>	

50. Report — what this covers, the disclaimer, and the way out

When you see it: The tail of the report, after every finding.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
What this covers	label	
Your rooms, your front door and your home's shape. We haven't looked at your water tank, trees or the road outside.	body <i>None of the four extra questions answered</i>	
Your rooms, your front door, your home's shape, and 2 of 4 extra things you told us about.	body <i>Some answered</i>	
Your rooms, your front door, your home's shape — and the 4 extra things you told us about.	body <i>All answered</i>	
Answer a few more and check more	button <i>Fewer than four extra questions answered</i>	
Vastu is traditional practice; this is guidance, not a promise. The score is our summary, not the tradition's.	body	
Done — see all my plans	button	

51. Report — the money bar (reader has not paid)

When you see it: Floating over the bottom of the report the whole time it is being read, for anyone who has not unlocked it.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
3 more problems with their remedies, and 5 more rooms read in full	body <i>Both counts above zero</i>	
3 more problems, with the whole reason and the remedies	body <i>Only problems locked</i>	
5 more rooms, each read in full	body <i>Only rooms locked</i>	
1 more problem with its remedies, and 1 more room read in full	body <i>Singular form of the first case</i>	
The whole reading, and every verdict's reason	body <i>Nothing counted as locked</i>	
Unlock the full report	button	

52. Paid unlock — the price, the button and the notice

When you see it: Reached only by tapping Unlock the full report. This is the money screen.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Unlock the full report	heading	
₹699	label <i>Shown when Google Play has not supplied its own price string, including whenever payments are switched off</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
₹699.00	label <i>Google Play's own price string when the store answers, carrying the buyer's currency and local tax</i>

55. Report — the words of each problem (from the rule data)

When you see it: Whatever problems this home has. The headline is always visible; the explanation is behind the price for every room except the entrance, kitchen and toilets.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Toilet in the North-East	heading	
A toilet stands in the North-East, the corner the tradition guards most closely. This is Ishanya — Shiva's quarter, the water element; in the mandala grid, the head of the Purusha. Every school examined calls waste here the single most serious placement. A toilet belongs in the North-West — Vayu's quarter, whose moving air carries waste out.	body	
Kitchen in the North-East	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The kitchen's fire stands in the North-East, Ishanya, the water quarter. A kitchen belongs in the South-East — Agneya, Agni's quarter, fire's own element. Fire set against water opposes the zone's element, so every school warns against this.	body	
Staircase or heavy weight in the centre	heading	
A staircase or heavy weight stands on the centre, which the texts say must stay open. The centre is the Brahmasthan — Brahma's own square, the element of space. The Manasara text says outright it must stay open and unweighted — a direct textual violation, not a matter of interpretation. That is why tradition keeps a courtyard at a home's middle.	body	
Cut or missing North-East corner	heading	
The plan is missing part of its North-East corner, the ground the tradition values most. That corner is Ishanya — the head of the mandala grid, its most auspicious square. The same tradition welcomes a North-East extension, yet calls a cut there a serious defect.	body	
South-West extension	heading	
The plan pushes out at the South-West, the corner meant to stay square and still. That corner is Nairitya — earth's element, the feet of the Purusha. The tradition wants it heaviest and most settled — the firm corner the home rests against. Pushing it outward unbalances exactly that.	body	
Main entrance on the South-West corner	heading	
The main entrance stands on the South-West corner — the one door placement every school examined prohibits. The 32-position door table names these positions Yama and Gandharva; in the mandala grid this is the heaviest, most closed corner, meant to stay solid. The entrance is the reading's highest-weighted element, so its position outweighs any single room.	body	
Master bedroom in the North-East or South-East	heading	
The master bedroom sits in a light corner — the North-East or South-East — not the heavy South-West. The head of the household should rest in the South-West: Nairitya, earth's element, the most settled quarter. The North-East is the lightest square, kept open rather than slept in; the South-East is Agneya, Agni's fire quarter — no place for rest.	body	
Toilet in the South-West	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
A toilet stands in the South-West, the corner that anchors the whole home. The South-West is Nairritya — earth's element, meant to stay heavy and undisturbed. The toilet is the one room the tradition holds impure, where things leave the house. Setting it on the anchoring corner works directly against that.	body	
Water stored against the mandala	heading	
The water is stored the wrong way round — weight in the light corner, or water under the heavy one. The mandala grid draws water to the North-East — Ishanya, the water element — and sends weight to the South-West — Nairritya, earth. So underground water and the borewell belong North-East, North or East; the heavy overhead tank over the South-West or West.	body	
Prayer room against a toilet, or a room tucked under the stairs	heading	
The prayer space and the toilet share a wall, or a room is tucked under the stairs. The tradition separates pure from impure by adjacency, not direction: a prayer space on a toilet wall is wrong anywhere in the home, and the same logic bars a store or toilet beneath a staircase. What is walked over should not be prayed beside, or kept in.	body	
A road pointing straight at the plot	heading	
A road runs straight at the plot — Veedhi Shoola, the 'street spear'. Our reading treats a thrust from the South, South-West, South-East or North-West as harmful; from the North, North-East or East, benign. A stricter school calls every road-arrow harmful. The schools genuinely disagree, so this is shown but never counted in your score.	body	
Heavy trees in the North-East or the centre	heading	
A heavy tree stands in the North-East or the centre — ground meant to stay light. The North-East should be the property's lightest, most open part; the centre is Brahma's square, which the Manasara text wants unweighted. A big tree sets permanent weight and shade on that ground. The same reasoning bars heavy storage from both places.	body	
A mirror facing the bed, or a beam over a bed or desk	heading	
A mirror faces the bed, or a beam runs over it. Both rules are 20th-century additions to Vastu. We searched for a classical basis and found none — no text we examined rules on either. They are included because customers expect them, and labelled honestly as modern rather than ancient.	body	
The home is long and narrow	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The home is more than twice as long as it is wide. The mandala grid behind the reading is a square; the tradition calls a square, or a rectangle within about one-to-two, balanced — only then do the nine zones come out roughly equal. This plan stretches its zones thin one way, so the reading is less even.	body	
Kitchen in the South-West	heading	
The kitchen's fire and bustle sit in the South-West, the corner meant to be stillest. The South-West is Nairritya — earth's element, the feet of the Purusha — kept heaviest and least disturbed; hence the master bedroom and heavy storage there. A kitchen, the busiest and hottest room, sets constant fire and movement there instead. Fire's own quarter is the South-East.	body	
Kitchen in the centre	heading	
The kitchen stands on the centre, the square the texts ask to be left open. The centre is the Brahmasthan — Brahma's square, the element of space — which the Manasara text asks be left open and unbuilt. A kitchen is the opposite: heavily serviced, full of weight, heat and plumbing. Fire's own quarter is the South-East.	body	
Master bedroom in the centre	heading	
The master bedroom stands on the centre, the square the texts ask to be left open. It is Brahma's square — traditionally the open courtyard — which the Manasara text asks stay open and unweighted. The master bedroom is the home's heaviest permanent room; its quarter is the South-West — Nairritya, earth, where weight should gather.	body	
Bedroom in the South-East	heading	
A bedroom sits in the South-East, the fire corner. The South-East is Agneya — Agni's quarter, the element of fire — given to the kitchen and whatever generates heat. Rest is the opposite, so the tradition keeps sleeping out of the fire corner. A bedroom's own quarters are the West, Paschima, and the North-West, Vayavya.	body	
Bedroom in the centre	heading	
A bedroom stands on the centre, the square the texts ask to be left open. The centre is the Brahmasthan, which the Manasara text wants open and unweighted. A bedroom — permanent, enclosed, furnished — is the opposite of open ground. Its own quarters are the West and the North-West.	body	
Toilet in the centre	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The toilet stands on the centre, the square the texts ask to be left open. The centre is Brahma's own square, reserved for the family's own deity — the demand comes from the Manasara text. A toilet — the one room held impure — thus stands on the plan's most reserved square. Its own quarter is the North-West, where air carries waste out.	body	
Living room in the South-West	heading	
The living room — the home's busiest room — sits in the South-West, its most private corner. The South-West is Nairritya, the element of earth, kept heaviest and least disturbed — which is why the master bedroom and storage belong there. All-day coming and going works against that corner's purpose. A living room's own quarters are the North, East and North-East.	body	
Living room in the centre	heading	
The living room stands on the centre, the square the texts ask to be left open. The centre is the Brahmasthan, which the Manasara text wants open and unweighted — in traditional homes it is the courtyard, not a room. Living here is not automatically wrong, but it is built ground on a square meant to stay clear. The heavier the furniture, the further from the rule.	body	
Staircase in the North-East	heading	
The staircase — usually the home's heaviest structure — sits in the North-East, its lightest corner. The North-East is Ishanya, the head of the mandala grid, kept lightest and most open. A staircase is solid, permanent weight — it belongs opposite: the South, South-West and West.	body	
Study in the South	heading	
The study sits in the South, the half of the home the tradition gives to rest. The South is Dakshina, Yama's quarter — given to rest, discipline and weight, not study. Study belongs where the desk can face East or North: the West — Paschima, Varuna's quarter of learning — or the North-West.	body	
Study in the South-West	heading	
The study sits in the South-West, the corner given to rest and storage. The South-West is Nairritya, earth's element — the heaviest, most settled corner, given to sleeping and storage rather than work. A study belongs where the desk faces East or North: the West — Varuna's quarter of learning — or the North-West.	body	
Store in the North-East	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
A store's stacked weight sits in the North-East, the corner meant to stay lightest. The North-East is Ishanya, the head of the mandala grid, kept lightest, cleanest and most open — and a store is weight that rarely moves. Storage belongs opposite: the South-West, West or South.	body	
Garage in the North-East	heading	
The garage sits in the North-East, the corner meant to stay lightest and most open. A garage is heavy, closed and full of metal — everything Ishanya, the head of the mandala grid, should not hold. A vehicle belongs in Vayavya — the North-West, quarter of air and movement — or the South-East.	body	
Garage in the South-West	heading	
The garage — the one thing that moves every day — sits in the South-West, the corner meant to stay still. The South-West is Nairritya, the anchor corner, kept most settled and least disturbed — and a garage sends something large in and out daily. A vehicle belongs in the North-West, the quarter of movement, or the South-East.	body	
Balcony in the South-West	heading	
A balcony opens up the South-West, the corner meant to be most solid. A balcony takes weight out of a wall and lets the corner breathe — but the South-West is Nairritya, earth's element, kept heaviest and most closed. Balconies belong on the light side: the North, East and North-East.	body	
Room in a prohibited zone	heading <i>The catch-all, used when no named rule matched</i>	
This element sits in a part of the plan its own rule prohibits. We hold a specific, sourced reason for every placement the app rules on. This fallback catches anything outside that list. So it stays deliberately general, claiming no detail we do not have.	body	

56. Report — what to change (from the rule data)

When you see it: Inside an opened problem, but ONLY for a reader who said they are building. Buyers and residents never see any of these.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Move the toilet to the North-West, or to the West. Leave the North-East for something light — a window, a prayer space, or nothing built at all.	body	
Move the kitchen to the South-East. If that corner is already taken, the North-West is the classical second choice.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Relocate the staircase to the South, the South-West or the West, and leave the middle of the plan open.	body	
Extend the footprint to square off the North-East corner while the plan is still on paper.	body	
Trim the South-West projection back so the footprint is square at that corner.	body	
Move the main entrance onto a favourable position on the North or the East wall.	body	
Move the master bedroom to the South-West. The South or the West are the accepted alternatives.	body	
Put the overhead tank over the South-West or West, and the sump or borewell towards the North-East, North or East.	body	
Separate the prayer space from the toilet wall, and leave the space beneath the stairs open.	body	
Buffer the affected side with a boundary wall or a line of planting.	body	
Keep the North-East and the centre free of heavy planting; the big canopy belongs to the South or West.	body	
Reposition the mirror, or route the beam away from directly over the bed or the desk.	body	
Where the plot allows, keep the built footprint closer to a one-to-one-and-a-half proportion.	body	
Move the kitchen to the South-East. The North-West is the accepted second choice.	body	
Move the kitchen to the South-East and leave the middle of the plan open.	body	
Move the master bedroom to the South-West and leave the middle of the plan open.	body	
Move the bedroom to the West or the North-West. The North, East and South are all acceptable too.	body	
Move the bedroom to the West or the North-West and leave the middle of the plan open.	body	
Move the toilet to the North-West or the West, and leave the middle of the plan open.	body	
Move the living room to the North, East or North-East. The West and North-West are acceptable.	body	
Move the living room towards the North, East or North-East, and keep the middle of the plan as open as the layout allows.	body	
Move the staircase to the South, the South-West or the West. The North-West is acceptable.	body	
Move the study to the West or the North-West. The North, East and North-East are acceptable.	body	
Move the store to the South-West, the West or the South.	body	
Move the garage to the North-West or the South-East.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Put the balcony on the North, East or North-East side, and keep the South-West corner solid.	body	
Move the element out of the prohibited zone.	body	

57. Report — where the texts record no cure (from the rule data)

When you see it: Printed above the remedy list on the problems where the tradition offers no fix. This is the honesty the paid product rests on — and it is also what the opening verdict contradicts.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The texts say where a toilet belongs; they record no cure for one built elsewhere. Vastu Shanti is a general pacification, not a fix for this in particular. Everything else below is 20th-century practice.	body	
The texts fix where the hearth belongs; they record no cure for a kitchen built wrongly. The two steps below are traditional hearth practice, not a fix for the room's position.	body	
There is no classical remedy for a corner that is simply not there. What follows is how the tradition asks you to treat the ground instead.	body	
The texts say where a door belongs; they are silent on correcting one built wrongly. The steps below are traditional entrance practice, not a recorded cure for this position.	body	
No classical correction exists for a toilet in the wrong quarter. The containment steps below are 20th-century practice, labelled as such.	body	
No classical text corrects this while the toilet stays where it is. The containment steps below are 20th-century practice.	body	
The classical texts never had to place a garage. This rule is reasoned from the North-East's purpose. The practical step below is 20th-century practice.	body	
The classical texts never had to place a garage. This rule is reasoned from the South-West's purpose. The practical step below is 20th-century practice.	body	
There is no classical remedy for a plot's shape. This is a limitation of the reading, not something an object can correct.	body	
This is the general case rather than a named one, so no specific remedy is offered. Moving it is the tradition's own answer.	body	

58. Report — the remedies (from the rule data)

When you see it: Inside an opened problem, under "If it cannot move — remedies". Each line carries where it comes from, in brackets.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Move or resize the element on the drawing so it leaves the wrong zone — free while the plan is still on paper. (From classical text)	body <i>Shown only to a reader who said they are building; stripped for buyers and residents</i>	
Keep the centre of the home open and unweighted — no heavy furniture, no storage, nothing built on it. The Manasara, a classical text, states this directly. It is the texts' one explicit instruction about the centre. (From classical text)	body	
Keep the North-East itself light: low furniture, no heavy storage, nothing piled up, and as much daylight as the room allows. (Traditional practice)	body	
Put the household's heaviest things against the South and West walls — the tallest wardrobe, the stored trunks. Weight then still gathers where the mandala grid places it. (Traditional practice)	body	
Wherever the kitchen ends up, set the cooking platform against that room's South-East corner. Stand facing East to cook. The tradition fixes the hearth's own direction, not only the room's. (Traditional practice)	body	
Keep water and fire apart inside the kitchen — sink and filter towards the North-East side, stove and gas towards the South-East side, not side by side. (Traditional practice)	body	
Keep the toilet door shut and the room dry and ventilated. Keep its floor a step higher than the rooms around it. This is 20th-century practice — no classical verse prescribes it. (Modern practice)	body	
A rock-salt bowl in the affected corner. 20th-century practice; no textual basis. (Modern practice)	body	
Sleep with your head to the South or the East, never to the North. Of all the direction rules, this is the one every school states alike. (Traditional practice)	body	
Move the bed into the South-West corner of whichever room you sleep in. The sleeper then still rests on the heaviest part of that room. (Traditional practice)	body	
Have the stair turn clockwise as you climb. Keep the space beneath it open — not closed in as a store or a toilet. (Traditional practice)	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Sit facing East or North at the desk. Which way the person faces is fixed as firmly in the tradition as where the room sits. (Traditional practice)	body	
Keep only light, seldom-used things in it — no heavy metal, no water drums, nothing stacked high — and keep the floor visible. (Traditional practice)	body	
Keep the seating towards the North and East half of the room. Keep the heavy pieces against its South and West walls. (Traditional practice)	body	
Park nose-out and keep the rest of that corner clear rather than using it for storage. 20th-century practice; no classical basis. (Modern practice)	body	
Keep a South-West balcony roofed and screened rather than left open. Put the heavier planters and furniture on it. (Traditional practice)	body	
Give the prayer space its own wall. A full-height cupboard, a shelf run or a service duct between it and the toilet is enough separation. (Traditional practice)	body	
Give the entrance a raised threshold. Keep the approach to it clear, lit and unobstructed. The threshold is a real element in the texts, not a modern addition. (Traditional practice)	body	
If there is another doorway on the North or East wall, make that the household's everyday door. Keep this one for service. (Traditional practice)	body	
Leave the ground at the missing North-East corner open, clean and a little lower than the rest. Do not fill it in with a shed, a store or a parked vehicle. (Traditional practice)	body	
A Tulsi plant near the North-East. Genuinely traditional (unlike money plant or lucky bamboo). (Traditional practice)	body	
Follow the mandala grid with water. Overhead storage towards the South-West or West; underground water and the borewell towards the North-East, North or East. (Traditional practice)	body	
Keep heavy trees off the North-East and off the centre. Put light planting, grass or open ground there instead. Keep the big canopy to the South or West. (Traditional practice)	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Screen the side the road points at with a boundary wall or a line of planting. The schools disagree on whether the direction of the thrust matters at all. (Schools disagree)	body	
Turn the mirror so it does not face the bed, or box the beam in behind a false ceiling. Modern practice; no classical basis found for either. (Modern practice)	body	
Vastu Shanti / Vastu Puja — the genuine traditional pacification, prescribed in the Mayamatam, a classical treatise. (From classical text)	body <i>Attached to every single problem in the rule set</i>	
A Vastu pyramid on the wall. 20th-century 'pyramid power'; claims of antiquity are marketing. (Modern practice)	body	
A copper strip along the zone boundary. Modern practice; efficacy not established. (Modern practice)	body <i>Never — no problem in the rule set references it</i>	

59. Report — where the schools disagree (from the rule data)

When you see it: Only the disputes that touch this home. Each shows two labelled readings and, where the app has ruled, which one the number follows.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
A toilet in the East	heading	
A defect	label	
Tradition holds a toilet spoils the East, the sun's quarter.	body	
Acceptable in one strip	label	
The 16-zone school divides the East more finely and allows a toilet in the strip nearest the South-East.	body	
A kitchen in the North	heading	
Not ideal	label	
The North belongs to Kubera, lord of wealth. Tradition reads it as water, unsuited to the kitchen's fire.	body	
Not ideal, not a fault	label	
Modern practice calls a northern kitchen less than best, not a fault to correct.	body	
The main bedroom in the West	heading	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Acceptable	label	
Tradition accepts the West, the other settled, heavier quarter, instead of the South-West.	body	
Advised against	label	
The 16-zone school keeps the main bedroom out of the west-south-west, its quarter of study.	body	
A front door in the South-East	heading	
Acceptable in the right position	label	
The 32 named door positions sort good from bad within the South-East. Exact position, not direction, decides.	body	
The Manasara, a classical Vastu treatise, says a home should never face the South-East.	body	
Which way to sleep with your head	heading	
Head to the South is best	label	
Tradition ranks head-to-South first, East next, West neutral.	body	
Avoid head to the North	label	
The one point every school agrees on. We pass it on as tradition, claiming nothing about your health.	body	
Which way the idols face	heading	
Against the West or South-West wall	label	
Classically, idols stand against the West or South-West wall, so the worshipper faces East.	body	
Against the East wall	label	
Modern practice often stands them against the East wall, facing West.	body	
Where a septic tank belongs	heading	
The sources contradict each other	label	
The North, North-West and South-East are each insisted on by serious sources.	body	
Too sharp to rule on	label	
Choosing one would invent a tradition. We report it as not checked unless you say where yours is.	body	
A road pointing straight at the plot	heading	
It depends which direction	label	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
A road from the North-East, North or East is harmless. From the South, South-West, South-East or North-West comes the thrust tradition warns of.	body	
Always harmful	label	
The strict school treats any such road as a wound, from any direction.	body	
A corner that sticks out	heading	
A North-East extension is welcome	label	
Tradition reads a North-East extension as a good sign, not a fault.	body	
Every extension is a fault	label	
The strict school treats anything that sticks out as a fault, the North-East included.	body	
Where the prayer room belongs	heading	
Classical — the centre	label	
The family deity holds the centre of the home, as the Manasara sets out.	body	
Modern — the North-East	label	
Near-universal modern practice places the prayer room in the North-East.	body	
Your score follows the modern reading: North-East ideal, North and East acceptable. No position counts as a defect, the classical centre included. The other school's advice never becomes a fault.	body <i>The only dispute in the set that says where the number stands</i>	

60. Report — what each direction means (from the rule data)

When you see it: Printed above the reason on every opened finding, and on the front door card. This is the Sanskrit and Vastu vocabulary the product is sold on.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Uttara, the quarter of Kubera. In the tradition: Wealth, career.	body <i>North</i>	
Ishanya, the quarter of Ishana / Shiva, the element of water. In the tradition: Clarity, health. The Purusha's head — most sensitive and most auspicious.	body <i>North-East</i>	
Purva, the quarter of Indra. In the tradition: Vitality, social standing.	body <i>East</i>	
Agneya, the quarter of Agni, the element of fire. In the tradition: Energy, transformation, finances.	body <i>South-East</i>	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Dakshina, the quarter of Yama. In the tradition: Rest, fame, discipline.	body <i>South</i>	
Nairritya, the quarter of Nirriti, the element of earth. In the tradition: Stability, bonds. The Purusha's feet — the heaviest zone.	body <i>South-West</i>	
Paschima, the quarter of Varuna. In the tradition: Gains, savings, learning.	body <i>West</i>	
Vayavya, the quarter of Vayu, the element of air. In the tradition: Movement, communication, transience.	body <i>North-West</i>	
Brahmasthan, Brahma's own square, the element of space. In the tradition: Must stay open. Reserved for the family deity.	body <i>The centre</i>	

61. Report — the reason each kind of room wants its direction (from the rule data)

When you see it: Inside an opened room row, under the verdict. Free for the entrance, kitchen and toilets; behind the price for everything else.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The main entrance is judged on a finer scale than the nine zones. It is read on the 32 named door positions along the mandala grid's edge. It is the highest-weighted single element in the whole reading.	body	
The kitchen is the household's fire. It belongs in the fire quarter: the South-East, Agneya, Agni's own corner. The North-West is the accepted second choice. It is Vayu's quarter of air, and air feeds fire. The tradition keeps the kitchen out of the water corner and the heavy corner.	body	
The head of the household should rest on the heaviest, most settled ground. That is the South-West — Nairritya, the corner of earth. It holds the feet of the Purusha, the figure laid over the plan. The South and West are accepted: the same heavier half of the home.	body <i>Master bedroom</i>	
Ordinary bedrooms sit best in the West, Varuna's quarter, or the North-West, Vayu's. Varuna rules water; Vayu rules air. Both quarters are settled enough for rest. The South-West is kept for the head of the household. The tradition keeps sleeping out of the fire corner.	body	
A prayer room belongs in the North-East — Ishanya, Ishana's quarter, the home's lightest, most sensitive part. The North and East, also kept open, are accepted next — Kubera's and Indra's quarters, from either of which a person at prayer still faces the rising sun. No direction is ruled out. The classical texts place the shrine at the very centre. We have chosen not to follow that reading, but we will not call it a defect.	body	
What leaves the house belongs in the quarter of movement. That is the North-West — Vayavya, Vayu's own corner — or the West. The tradition keeps the toilet off the North-East, its most sensitive square. It keeps it off the South-West too — the home's anchor.	body	
The living room is where the household gathers and guests are received. It belongs on the lighter, more open half: the North, the East and the North-East. These are the quarters of Kubera, Indra and Ishana. It is kept out of the heavy, private corner.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
A staircase is the heaviest permanent structure in most homes. It goes where the tradition wants weight: the South, the South-West and the West. It is kept off the North-East, which should stay light. The Manasara, a classical text, asks that the centre be left open.	body	
The study is placed so the person at the desk faces East or North while working. That points to the West — Varuna's quarter, which the tradition links with learning — or the North-West. The two heavy southern corners are kept for rest and storage, not work.	body	
Dining sits best in the West, Paschima, close to the kitchen's fire corner without standing in it. The North and East are accepted. Nothing is outright prohibited for a dining room.	body	
A store is stacked weight that seldom moves. It belongs in the heavy half: the South-West, the West or the South. Only the North-East is ruled out — the tradition wants that corner lightest and clearest.	body	
The North-West is Vayavya, Vayu's quarter of movement. The tradition links it with things that come and go — exactly what a guest room is for. The West is accepted. Nothing is outright prohibited.	body	
A vehicle comes and goes, so the North-West, the quarter of movement, suits it. The South-East is the other accepted place. It is kept off the North-East, which must stay light, and the South-West, which must stay undisturbed. The garage is a modern room the classical texts never placed. The rule is reasoned from what those two corners are for.	body	
A balcony is an opening in a wall. It belongs on the light half: the North, East and North-East. The tradition wants the South-West solid and closed. So it is the one place a balcony is ruled out.	body	
The tradition discourages a basement altogether, rather than placing it in a direction. The modern schools that do permit one disagree about where. We do not score a basement at all rather than pick a side.	body	

62. Report — the engine's notes strip

When you see it: A coloured strip just under the balance bar, when the engine has something to say about the plan as a whole.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
Add your home's layout to see its score.	body <i>No layout at all</i>	
Add your home's outline to see its score.	body <i>No usable outline</i>	
Skipped 2 rooms we couldn't read clearly.	body <i>Some rooms were dropped; singular reads "1 room"</i>	
We estimated the home's outline from your rooms — add the real outline for accurate corner and shape checks.	body	

THE WORDS ON SCREEN	KIND	YOUR COMMENT
The outline crossed itself, so we simplified it — please recheck it for accurate corner and shape checks.	body	
Mark your main entrance to include it in the score.	body	
More than one main entrance was marked — using the first.	body	
Read under the classic 8-direction tradition, which is the reading this app scores.	body <i>The plan asks for a school profile the engine does not run</i>	
We couldn't fully read this plan — add or adjust your layout to try again.	body	
This home sits about 12° off the compass; the score accounts for that.	body	
Your home isn't a regular rectangle. A squarer, more regular shape is traditionally preferred; we've scored the rooms and entrance, and the corner checks need a clearer outline.	body	
This home is a bit long and narrow; a squarer shape is considered more balanced.	body	

63. Report — copy that no longer reaches anyone

When you see it: Never. These sentences were written for the free score screen that was removed on 10 August, and nothing in the app draws them any more — but the test suite still checks their wording, so they read as live copy to anyone auditing the code.

THE WORDS ON SCREEN	KIND	YOUR COMMENT
None of these is a defect, and none is prohibited — just not the direction the tradition prefers. They still count in your score, so we list them.	body	
All 8 problems — 5 new to you — each with its full reason and remedies	body	
3 rooms rated not ideal — which, and why	body

Overall opinion

Is this rule set fit to be built into a commercial product? What would you refuse to ship?

On independence. We would far rather hear that this needs substantial work than be told it is fine. There is no commercial pressure on your answer, and no version of this review that disappoints us except an inaccurate one. We are showing it to more than one consultant, from different schools, precisely because we expect you to disagree with each other — and we would rather build on a documented disagreement than a false consensus.
